

# DEI and Immersive Technologies in Nursing: Enhancing Simulation Solutions for Learners and Faculty

*Speakers:*

Amy Kline MA, RN, CHSE  
*Laerdal Medical*

## Our suite of simulation solutions:

- Allow for multiple and frequent opportunities for learners to demonstrate and assess their progression to competence with diverse, equitable, and inclusive (DEI) products and solutions.
- Can help programs engage in various experiential learning activities through Laerdal's immersive technology-focused solutions.
- Demonstrates the importance of utilizing data-driven insights for understanding learners' opportunities and strengths.

# Competencies in Nursing Education

California Community Colleges

---

## Request for Applications (RFA)

---

### California Community Colleges Chancellor's Office Rebuilding Nursing Infrastructure Grant

WORKFORCE AND ECONOMIC DEVELOPMENT DIVISION  
Equitable Student Learning, Experience, and Impact Office

**Funding Years** Fiscal Year 2024-25

**Release Date** November 15, 2024

**Application Deadline** Applications must be received January 31, 2025, at 11:59 p.m. in NOVA

**Funding Source** Rebuilding Nursing Infrastructure Grant Program (Strong Workforce Program)

A competitive grant of up to \$2,000,000 per California community college

**Total Available funds** \$57,000,000

**Expected Grant Term** July 1, 2025 – June 30, 2027

- 1) Develop strategies for recruiting, retaining and training high quality faculty
- 2) Develop strategies for engaging and retaining nursing students
- 3) Purchasing new equipment
- 4) Developing or scaling efforts that lead to additional clinical placements

Statement of Need: To meet the expectations of today's learners, nursing needs to provide students with more flexibility in when and where they practice and learn

## Tips for improvement

- x x x Remember to ask the patient about allergies before administering drugs.
- x x x You should reassess the patient's breathing at this point.
- x x x You administered 5 mg of hydralazine IV. The drug was administered earlier. The maximum total dose is 5.0 mg. You should have used the basic rights of medication administration to avoid improper use of drugs.
- x x x You should have examined the patient's arms.
- x x x You should have examined the patient's chest.

## Simulation feedback

- ✓ You reviewed the provider's orders in the EHR.
- ✓ 01:53 You attached the [pulse oximeter](#). This was indicated by order.
- 01:56 Patient status - Heart rate: 101. Pulse: Present. Blood pressure: 165/99 mm Hg. Respiration: 19. Conscious state: Appropriate. SpO2: 98%. Temp: 98.6 °F (37.0 °C). EFM: Occasional acceleration. Fetal heart rate: 160.
- 02:06 Patient status - Heart rate: 101. Pulse: Present. Blood pressure: 169/101 mm Hg. Respiration: 19. Conscious state: Appropriate. SpO2: 98%. Temp: 98.6 °F (37.0 °C). EFM: Baseline. Fetal heart rate: 155.
- ✓ 02:09 You administered 4 mg of ondansetron IV. It is important to use the basic rights of medication administration to ensure proper drug therapy. You should consider administering this drug slowly. This was indicated by order.
- x x x Remember to ask the patient about allergies before administering drugs.
- ✓ 02:26 You assessed the respiration. She is breathing at 19 breaths per minute. The chest is moving equally.

Statement of Need: Ensuring students have multiple experiences to care for patients with a variety of conditions.

MamaAnne

A person wearing blue medical scrubs is shown from the chest down, holding two white VR controllers. They are in a clinical setting, possibly a hospital room, with a blurred background showing medical equipment and another person in the distance. The person's left arm has a tattoo. A white text box is overlaid on the lower left of the image.

Prioritization Scores – Pre, During, and Post Simulation

Overview of Critical Actions Performed and Missed

Reflection Question Review for Debriefing of VR experiences

Recommended Prioritization

Gradebook scoring for faculty and students

## Reflection Questions and Answers

Before starting the VR simulation, this was your initial horizontal prioritization and rationale:

**How are you feeling after finishing your simulation in VR?**

I feel OK about the care that I provided.

**What (if any) aspects of the overall simulation experience challenged you the most? Why?**

Receiving interruptions and having to re-prioritize my care and tasks was difficult.

**While in the session, you experienced requests from one or more of the patients. Which situations do you recall? Which ones challenged you the most? – How did this impact your prioritization and why?**

# vrClinicals for Nursing

## Recommended Sim Prioritization at Interruptions

This is how we would recommend prioritizing the patients during interruptions in your care. Multiple approaches exist, so review our recommendation and compare it to your own rationale, and discuss it with your instructor.

Managing multiple patients involves deciding the order of care and which treatments to prioritize per patient. Identifying urgent actions can guide you when to transition between patients, allowing simultaneous handling of multiple cases.

### **Joan has abdominal pain**

Despite having initial patient priorities, it is essential to reassess as new information becomes available. The bullet points below outline the thought process during such a moment of reassessment.

#### Interruption

The call light was activated by Joan Biagini in room 24, who reported experiencing abdominal pain.

#### Reassessment

Upon receiving new information about Joan Biagini's

## Sim Prioritization Score

Your score:   

This score shows how well your in-sim prioritization decisions match our recommended prioritization for the patients through the scenario.

The score considers the display and understanding of:

- Patient priority levels compared to one another as they unfold and interruptions occur
- Critical actions needed to manage priority levels across multiple patients
- Correct nursing practices in the care of individual patients

# vrClinicals for Nursing

## Overview of Performed and Missed Critical Actions

This is a list of all expected Critical Actions for each patient, displaying which ones you performed and which ones you missed.

Habib  
Abdallah

- ✓ Attach the blood pressure cuff.
- ✓ Attach the pulse oximeter.
- ✗ Check the pulse rate.
- ✓ Measure the temperature.
- ✓ Examine the patient's chest.
- ✗ Auscultate the heart.
- ✗ Examine the patient's arms or legs.
- ✓ Examine the patient's abdomen and pelvis.
- ✗ Auscultate the patient's abdomen.
- ✗ Ask if the patient has any nausea or vomiting.
- ✗ Ask if the patient had experienced any diarrhea today
- ✓ Assess the patient's pain.
- ✓ Assess the patient's IV site.

3) Develop strategies for recruiting, retaining, and training high-quality nursing faculty, including, but not limited to, offering incentives, including stipends and flexible working hours, to recruit and retain nursing faculty, and by **providing professional development opportunities.**

Statement of Need: Faculty need training not only in operating teaching technologies but also in best practice for integrating simulation across the curriculum to improve student outcomes

Laerdal Educational Services

# Faculty Development

**NEW! Simulating for Equitable Health Outcomes**

This course has been designed to showcase how diversity training can be tied into all aspects of simulation-based learning. Our Simulating for Equitable Health Outcomes course is an immersive training session that can be delivered to all areas of your organization.

**New! CORE Debriefing**

The CORE Debriefing workshop is a blended learning course, which comprises a one-day teaching session that can be delivered live at your site or virtually and is coupled with a complementary eCourse.

**Getting Started Courses**

Learn the basics of your simulator, including startup and shut down procedures, how to run basic scenarios, patient monitor and instructor device operations, operating modes, and other useful system features.

**Software Courses**

Learn more about the SimPad or LLEAP Learning Applications and how to start using your SimPad or LLEAP simulator system in your education.

**Teaching with Scenarios**

Learn how to prepare for a simulation, practice facilitating a simulation, and an introduction to best practices for debriefing.

**Scenario Programming**

Learn to design your own scenarios using Laerdal's SimDesigner application. Basic and Advanced courses enable you to use the Laerdal SimDesigner worksheet to construct scenarios relevant to your learning objectives.

**Our professional team helps simulation faculty and staff get the most out of their training program**

**Laerdal's Educational Services Solutions are:**

- Designed for instructors, administrators, operators and technicians
- Geared toward all levels of practitioners, from beginner to advanced
- Available through onsite sessions, live online sessions or eLearning courses
